

What is IFX

- **Fasteners**
- **IFX Lite vs Full (*Free v Licensed*)**

Quick Demo

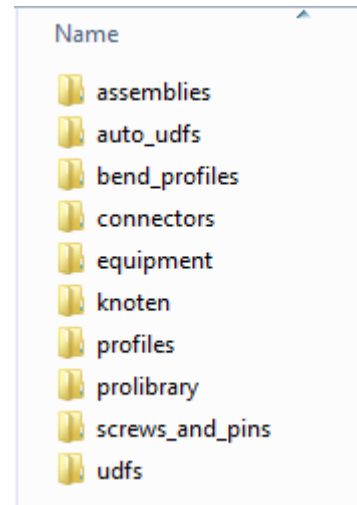

Contents

- Workings of IFX
- Setup Considerations
- Where to Edit
- Where to Store
- Resources
- OOTB Library

Default Configuration

- **Parts located in Creo Install point**
 - Common Files\afx\parts\

- **Configuration files**
 - User Interface
 - *.mnu*
 - Part Configuration Files
 - *.dat*
 - CAD Data
 - *Seed Part*

Determine Implementation Method

- **Add / Remove parts to 'Out of the Box' library**
 - Create parts based on copies of OOTB files
 - Modify OOTB items to include your Parameters
 - Add in-house Company parts to the UI
 - Remove OOTB choices from the menu
- **Start fresh with Legacy in-house Company Parts**
 - Naming for files
 - Create required datums & features
 - Designate datums and dimensions to the .dat file

Edit / Create CAD Files

- **File Naming**

- Key connection between UI and Data store
- MNU file points to DAT file
 - but must be referenced as a PRT

```
myfasteners.mnu *
My Legacy Fasteners
#
#
legacy_fasteners.prt
Converted Legacy Fasteners
Konvertiert ältere Befestigungen
```

- The *.mnu file name must be the same as the name of containing folder.
- The Screw, Nut, & Washer must be in commonly named folders

Creation Method of CAD Files for Library

- **On-The-Fly**
 - As defined in OOTB

- **Individual part files**
 - Pro
 - Revision of one part easier
 - Required when family parts are not allowed
 - Con
 - Revision of many parts difficult
 - Many more Parts in Windchill

- **Family Table**
 - Pro
 - Revision of many parts easy
 - Fewer files in Windchill
 - Easier creation of new variants
 - Con
 - More complicated to first create

- **TIP**
Use special DAT Syntax

Putting DAT Files in Windchill

- **Store files in Installation point**

- *Current Method*
- *Use Current Structure*
- *Installation point must be updated when Windchill library is updated*

- **Store in PTC Windchill**

- *Planned Method - Direct integration to Windchill*
- *Use Structure Preferred by Org.*
- *Installation point will not need to change when content changes*

ETA Creo 3 Build M??? (Winter 2015)

Will be as Piping is currently implemented

Putting Files in Windchill

- **CAD Files**

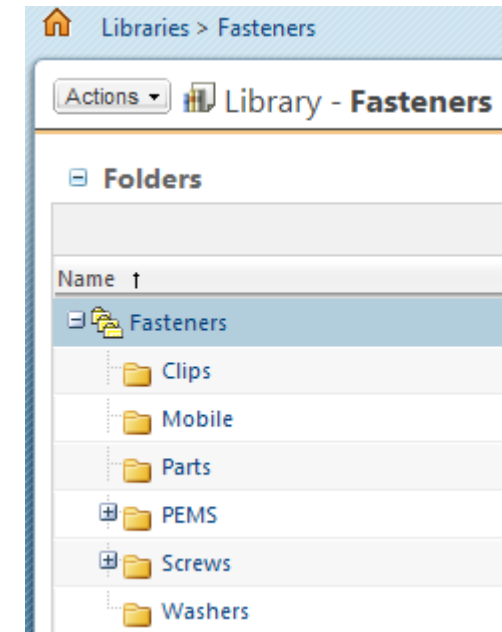

- Can be stored in PTC Windchill Today
 - Dat and MNU files need to stay in the Installation
- Location
 - Upload to PTC Windchill in your preferred folder organization.
 - Needs to be accessible for all Users as Read Only
