“Linking” Data – Higher Level View (Our Evolution)

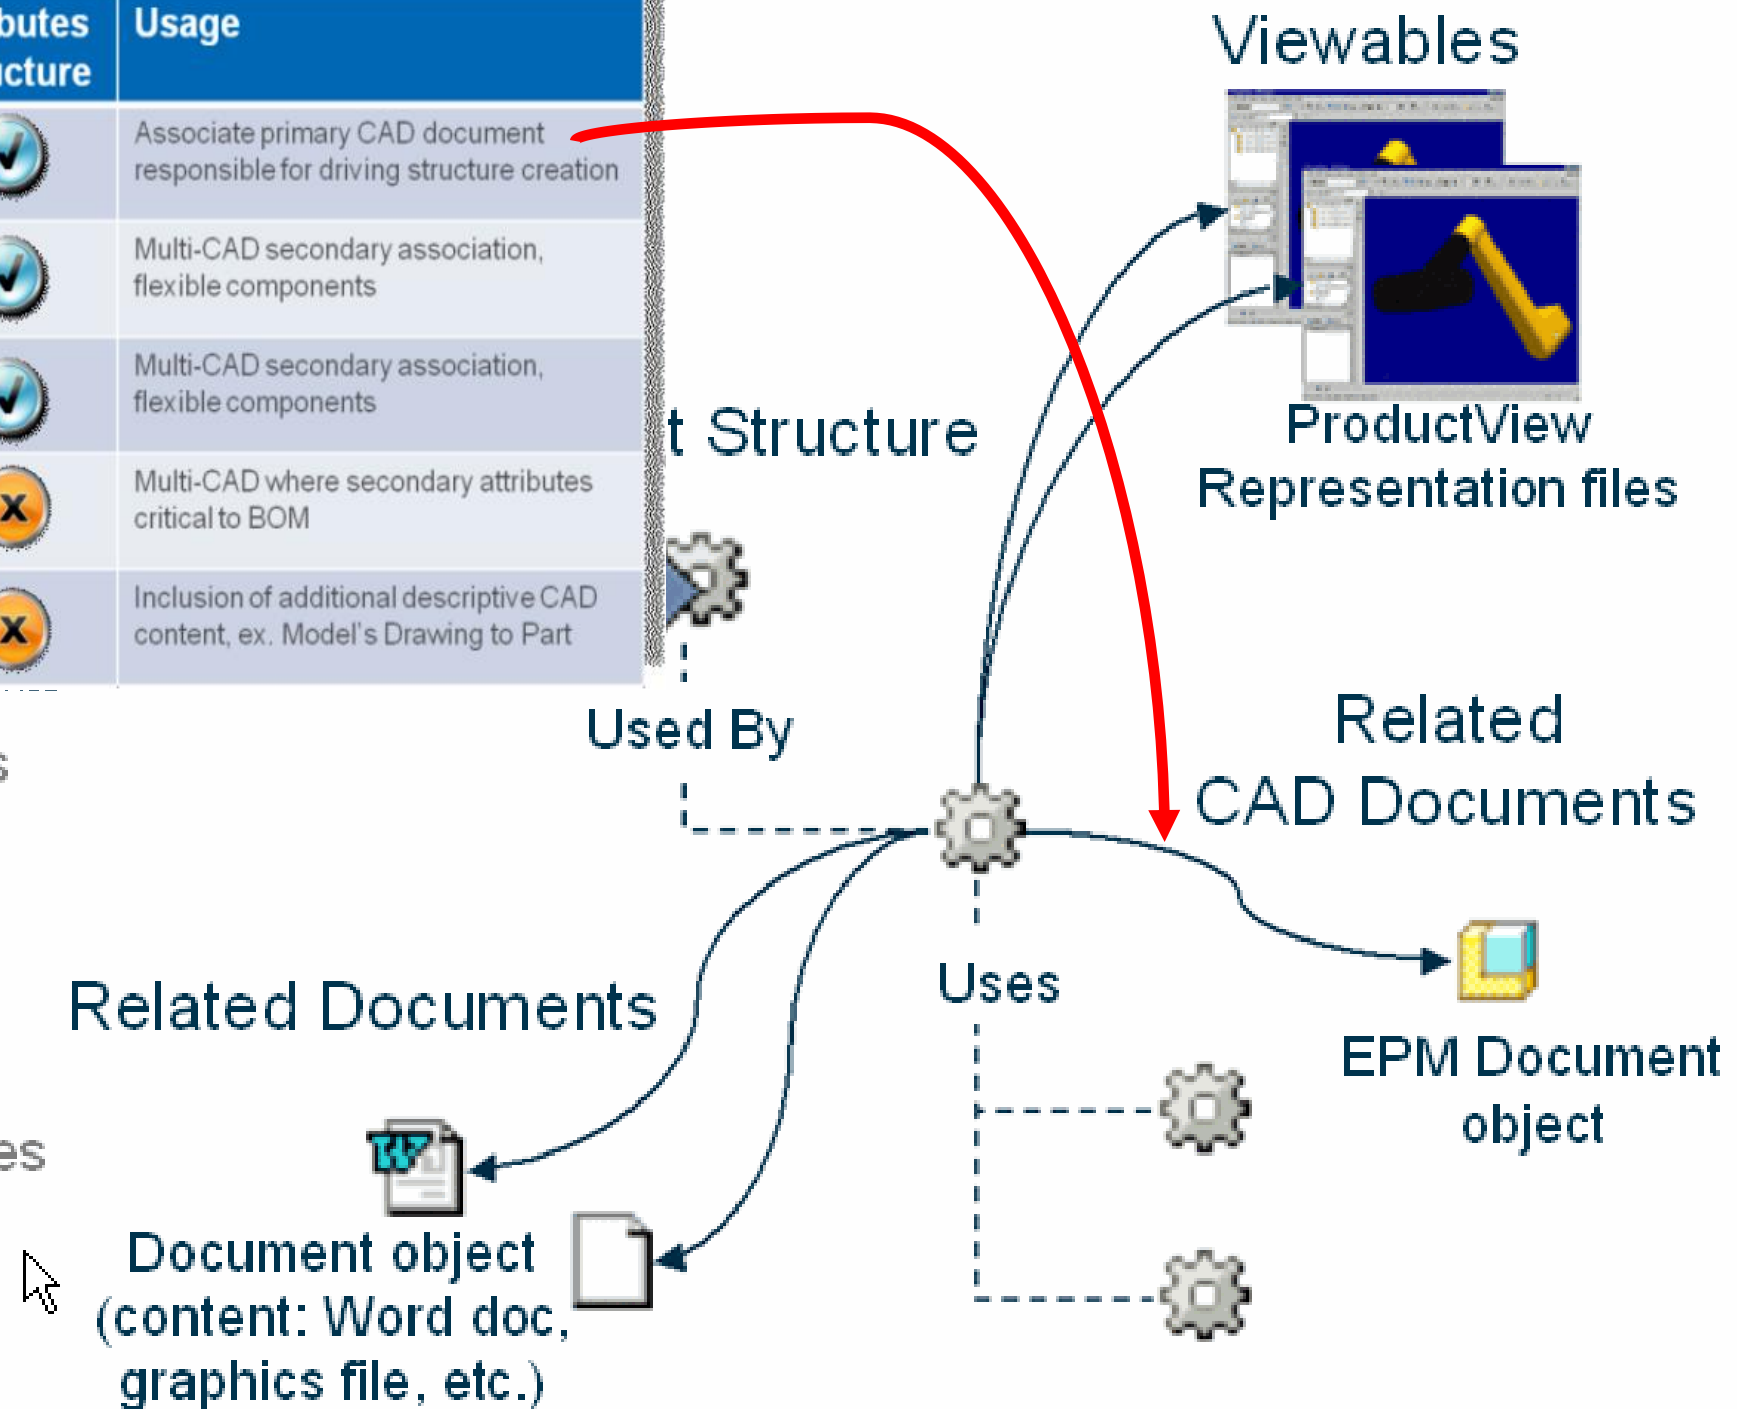

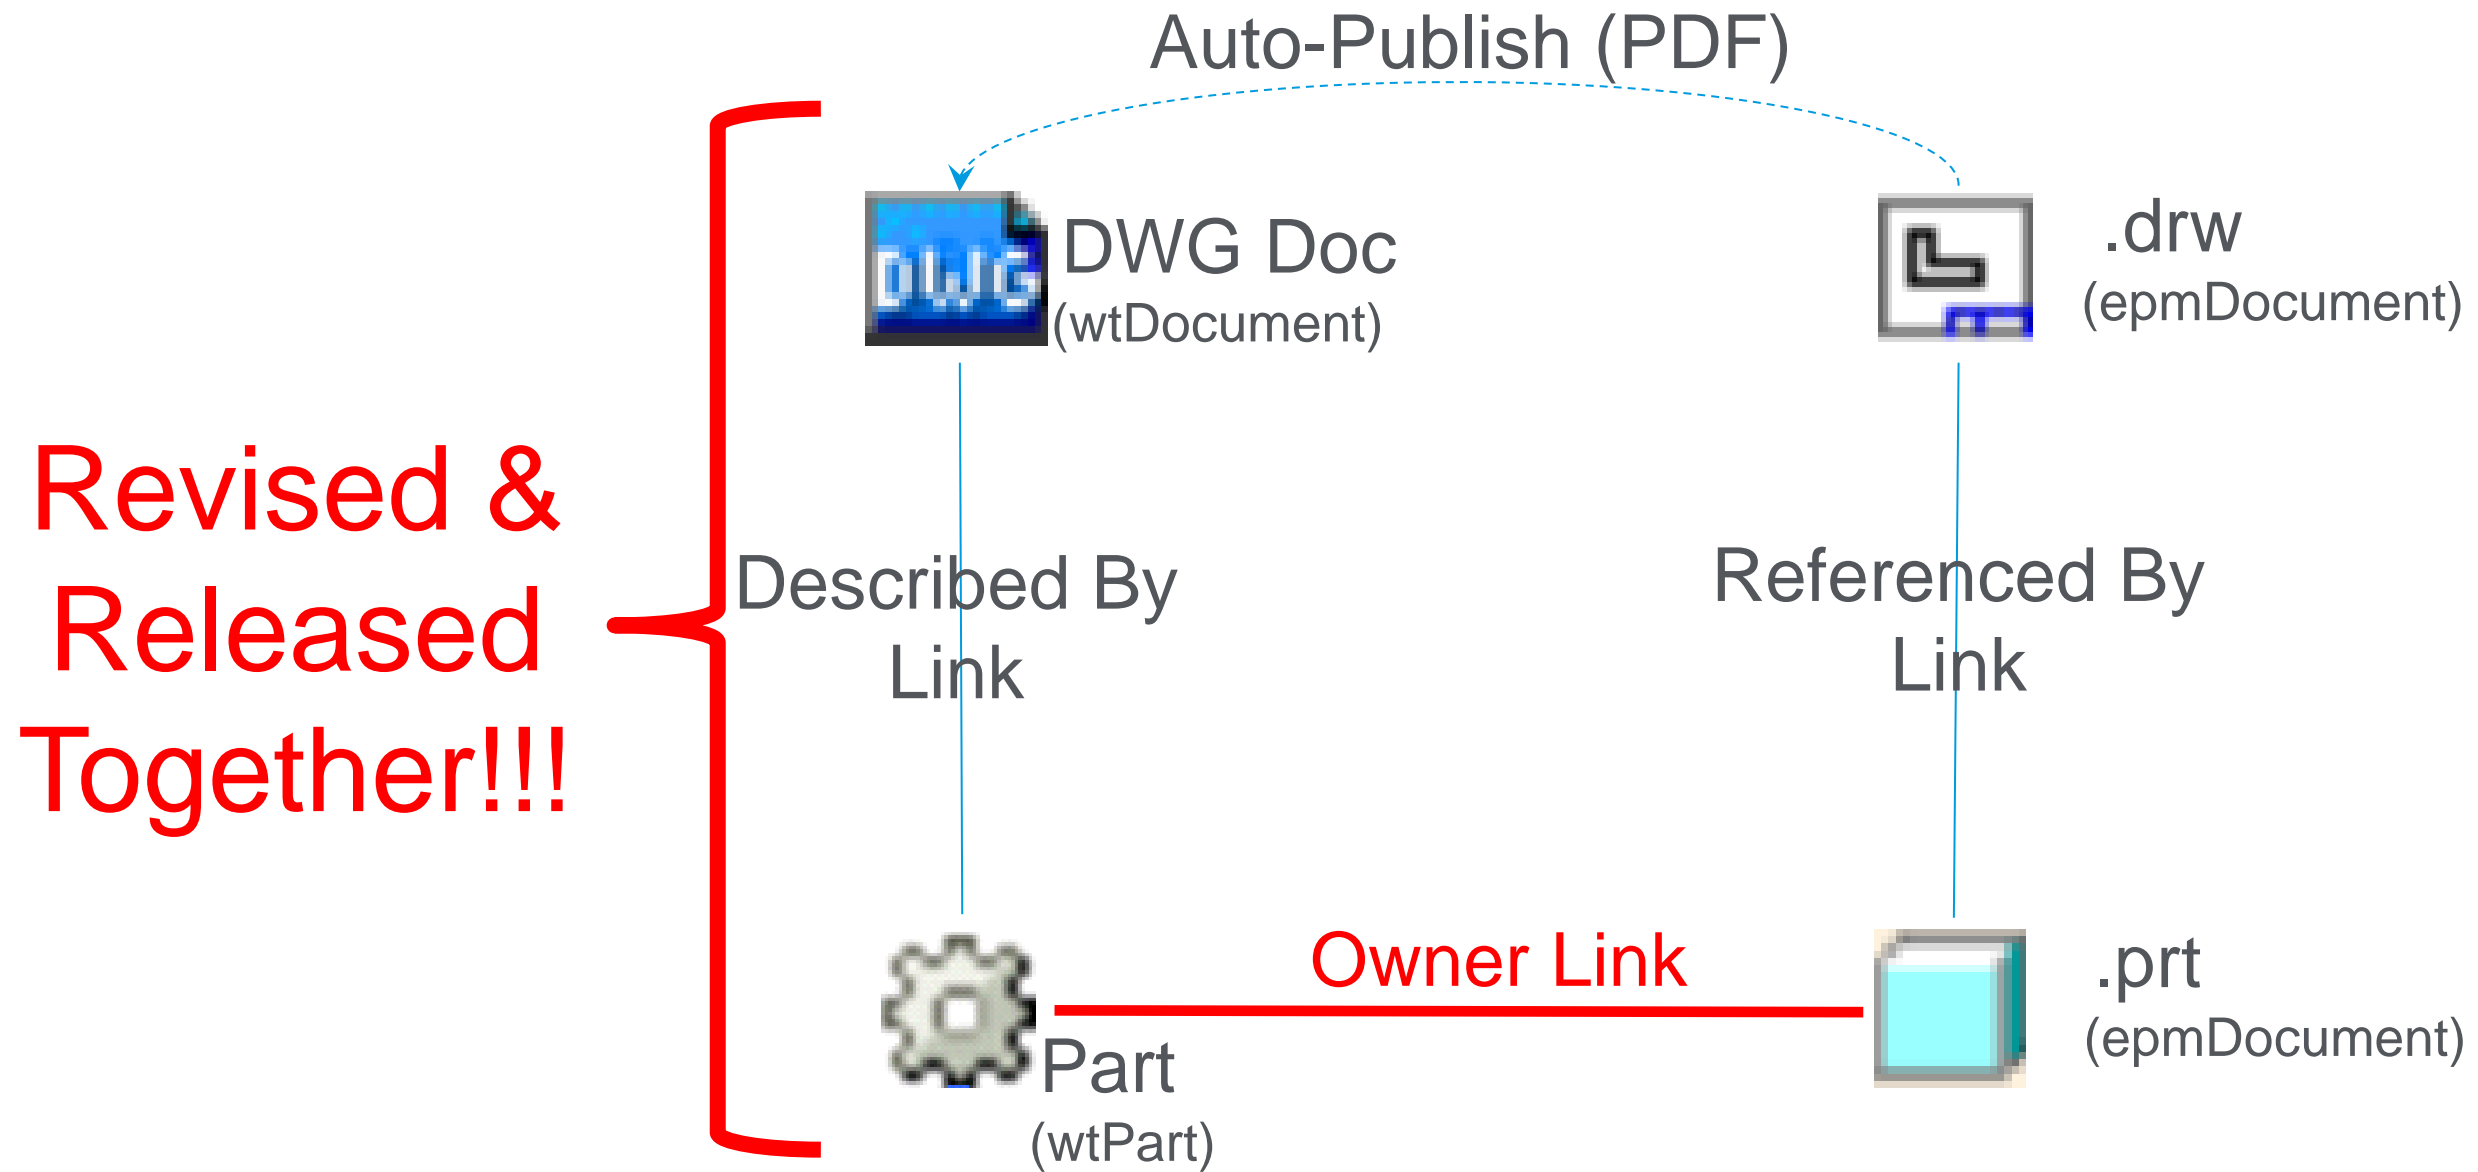

Why Links Matter (Functional Interdependencies)

Association Type	Builds Structure	Attribute	Reps	Contributes to Structure	Usage
Owner	✓	✓	✓	✓	Associate primary CAD document responsible for driving structure creation
Contributing Image	✗	✓	✓	✓	Multi-CAD secondary association, flexible components
Image	✗	✗	✓	✓	Multi-CAD secondary association, flexible components
Contributing Content	✗	✓	✗	✗	Multi-CAD where secondary attributes critical to BOM
Content	✗	✗	✗	✗	Inclusion of additional descriptive CAD content, ex. Model's Drawing to Part

- ⦿ Domain Policies
- ⦿ Life Cycle
- ⦿ Workflow
- ⦿ Principals
- ⦿ Teams and Roles

Note: Both initial 'conversion'
and sustaining effort is required

3D viewables will also
support many other
business benefits...

Publish

(All 3D CAD; Initial batch of all; plus on Check In forever)

Essential to O&V
and Mfg processes
and functionality

Build

(all linked objects; any pre-WildFire 5 CAD must be Saved in Creo Parametric)

Move

(linked objects + rest of 'release package' into same 'linked' context)
(very time-consuming; Required step—due to 'data dirt' --to enable use of context collector preferences)

Essential to
support change
processes and
collector behavior

Link

(owner-link Part to CAD)

Supporting (P/N based) CAD Filename Conventions

Linked Data Enables Variant Work Instructions using PTC Creo View Images Reordered by Manufacturing Operations.

Windchill Options and Variants Capabilities
Windchill offers the following capabilities to support product variability and variant generation.

PTC®

Product: Windchill PDMLink
Release: 10.1
Datecode: M020

Managing Part-CAD Document Relationships

Since the first release of the Windchill Workgroup Managers, we have provided customers with the ability to drive part structures from CAD structures so that (where they are the same) the two will be kept in sync (CAD-driven product structure, sometimes referred to as "bottom up" design). In release 10.0, we provide customers with tools to drive CAD structure from part structure (top down design).
The following sections discuss how structures display and behave in Windchill. For more information, see the Windchill Help Center.

PTC® Creo® Parametric™

Release: 2.0

PTC Creo Options Modeler
Home > Products > PTC Creo > 3D CAD > Options Modeler

Working with Manufacturing Parts and Bills of Materials
Using the eBOM and the digital mock-ups, manufacturing engineers establish strategies on how to build a product that satisfies these engineering specifications. Manufacturing engineers re-organize and re-structure the eBOM into a manufacturing bill of materials (mBOM) that outlines the product from a manufacturing process and strategy point of view.

Process Plan Information Page
A process plan is the detailed description of the tasks to be done on the shop floor in order to produce, inspect, assemble, repair or maintain a given part or assembly.

Viewing a Work Instruction
A work instruction is a dynamically generated HTML page that combines process plan information (sequences, operation, part allocation, resource allocation, time, etc.) and all related documents such as drawings, images and 3D sessions with annotations.

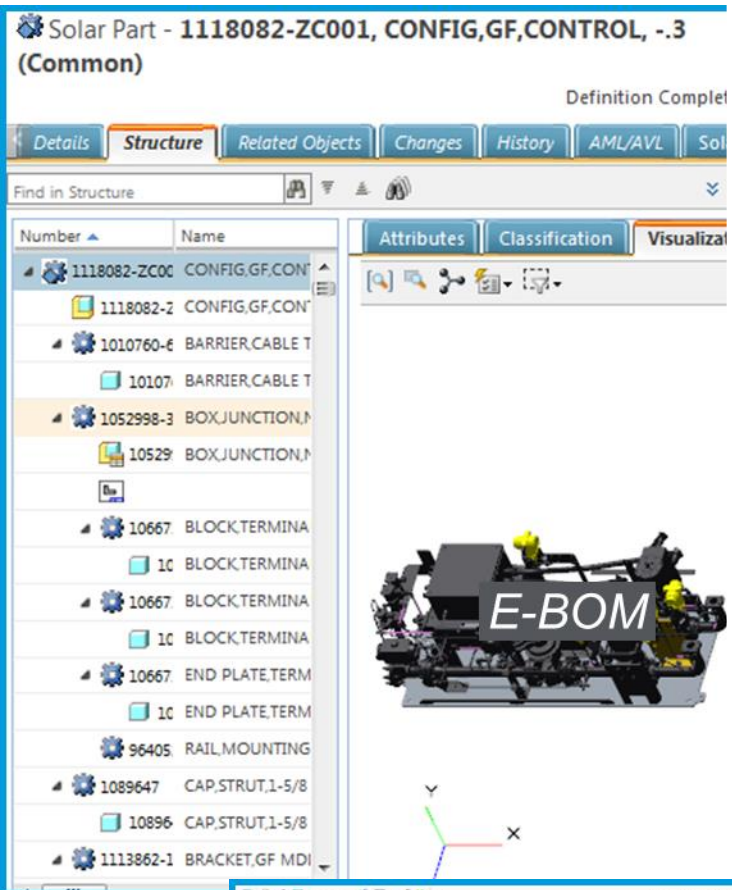

Windchill 10.1 MPMLink

Creo View
Product: PTC Creo View Lite
Version: Creo 3.0

- 1. Engineering Variant**
 - a) PTC Options & Variants create an E-BOM in PDMLink
 - b) PTC Options Modeler creates a CAD BOM in PDMLink
 - c) PDC PDMLink auto associates E-BOM to CAD BOM with Owner Links
- 2. Manufacturing Variant**
 - a) PTC MPMLink and Options & Variants create an M-BOM in PDMLink
 - b) Solar enhancement "stitches" variant E-BOM to M-BOM.
- 3. PTC MPMLink publishes Variant updates to Process Plan**
- 4. MPMLink Work Instructions to Manufacture Design by Virtual Operations**
- 5. Creo View Operations available to Shop Floor**

Linked Data Enables Variant Work Instructions using Creo View Images Reordered by Manufacturing Operations.

Working with Manufacturing Parts and Bills of Materials

Using the eBOM and the digital mock-ups, manufacturing engineers establish strategies on how to build a product that satisfies these engineering specifications. Manufacturing engineers re-organize and re-structure the eBOM into a manufacturing bill of materials (mBOM) that outlines the product from a manufacturing process and strategy point of view.

Process Plan Information Page

A process plan is the detailed description of the tasks to be done on the shop floor in order to produce, inspect, assemble, repair or maintain a given part or assembly.

Viewing a Work Instruction

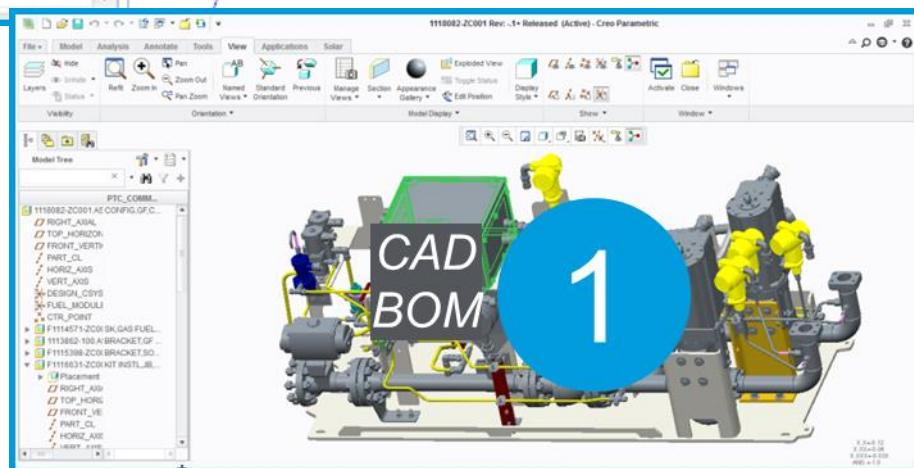

A work instruction is a dynamically generated HTML page that combines process plan information (sequences, operation, part allocation, resource allocation, time, etc.) and all related documents such as drawings, images and 3D sessions with annotations.

(B4) Manufacturing Config	Configurable, Not Collapsible, Not Gathering Part, Not Manufacturing Phantom Part, End Item
(B5) Operation Phantom	Gathering Part, Manufacturing Phantom Part, Not End Item
(B51) PCS Operation Phantom	Configurable, Not Collapsible, Not Gathering Part, Manufacturing Phantom Part, Not End Item
(BT) Top Level Test Plan	Gathering Part, Not Manufacturing Phantom Part, End Item
(BU) Test Plan Function	Gathering Part, Not Manufacturing Phantom Part, End Item
(BV) Test Plan	Gathering Part, Not Manufacturing Phantom Part, End Item
(BX) Manufacturing Zone	Gathering Part, Not Manufacturing Phantom Part, End Item

1. Objects

6. Find # on Data Model

7. Data Model

4. Attributes

5. Icons

denotes image link to Layout Schematics instead of Owner link to CAD.
Context
"Linked" or "Configurable" in the context name Denotes "Linked."
PCS

buildable configurations of Operation Phantoms and/or Solar Parts are referred to as "Subassemblies." In one case, a Manufacturing Subassembly is referred to as a "Test Plan" where it only uses Operation Phantoms without any Solar Parts in order to configure a project Test Plan.

Linked Data

- **Part & CAD Creation Process**
 - Linking a WTPart to an EPMDocument is surprisingly easy!
- **Engineering Change & Release Process**
 - Revision Rules & Collector Preferences
 - Pre Release Checks – *“Easy to do right. Easy to do wrong. Hard to clean up.”*
- **Operational Definitions are Essential**
- **Existing Enhancements**
 - Regression Testing
 - Adjust to New Objects, Rules & Processes
 - *Identify & Close New Gaps*
 - *Configurations*
 - *Reports*
 - *Automations & Workflows*

Linked Data with Options & Variants and MPMLink

- PTC Creo View Publishing Rules – “Publish as Positioning Assembly by Default.”

1118XXX-ZC001 (Design View)

1118XXX-ZC001 (Manufacturing View)

E-BOM

M-BOM

Publishing epmDocument Assembly Viewable to wtPart as **Positioning Assembly** in E-BOM

Allows virtual reorganization of wtPart in M-BOM

Linked Data with Options & Variants and MPMLink

- PTC Creo View Publishing Rules – “Publish as Positioning Assembly by Default.”
- “Raw Stock” Modeling for Non-Each UOM
 - “Each” units of measure work well with “Assigned Choices” in Options & Variants and Options Modeler, but non-Each units of measure do not.
 - CAD “Owner Links” to non-each units of measure (raw stock) disrupt the E-BOM and M-BOM visualization.
 - Objects with a Unit of Measure other than Each cannot be added to a “Collapsible” parent.

No Owner Link to CAD
