

Workspace

- A workspace is a distinct storage location in the user's personal folder on the server (server-side workspace) *and* on the client (client-side workspace cache)
- Together, server-side workspace and client-side workspace cache make up the workspace
- The workspace interface is used to manage the CAD application user's local working environment and the communication between this local environment and the Windchill server

Windchill action from Creo

- PDM actions to save and retrieve data from Windchill server
 - Add to Workspace
 - Check out
 - Download
 - Upload
 - Save
