

MIMO

KEEPING AN EYE ON YOUR SLEEPING
LITTLE ONE

IOT COURSE 2 PROJECT

Problem with babies?

- How do I know if my baby has gas?
- What can cause a baby to projectile vomit?
- What can cause a newborn to have trouble breathing?
- What is a projectile vomiting?
- How to make it to sleep?
- What types of intervention services are available?
- What should I do if my baby's hearing hasn't been screened yet?

What can we do?

Mimo actively keeps parents updated throughout the night to changes in their baby's activity, and can connect multiple caregivers at once. Ensuring everyone gets quality sleep and stays on the same page, because when baby sleeps, parents sleep.

Remember ...

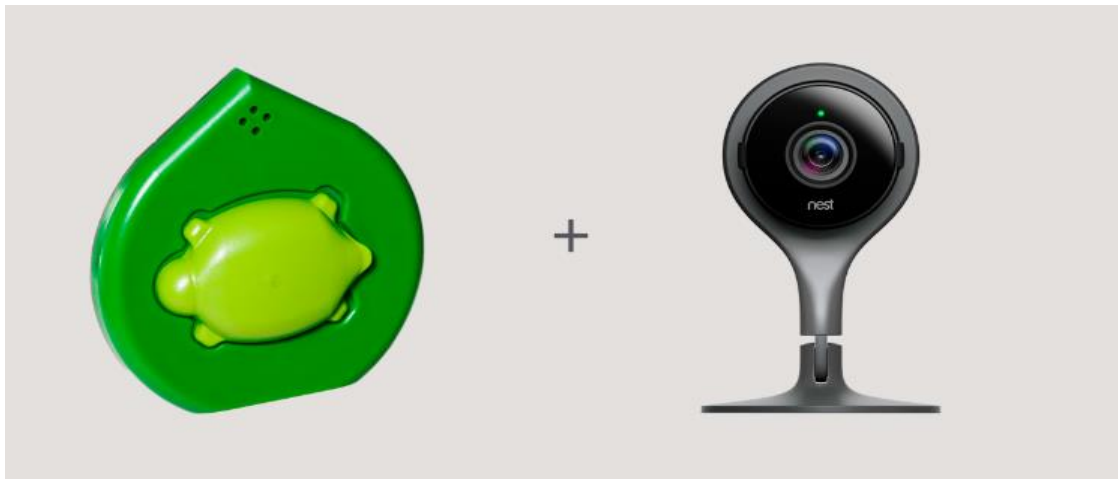

- Babies don't sleep as deeply as you do.
- Babies have shorter sleep cycles than you do.
- Nightwaking has survival benefits.

➤ Product Infrastructure

With Mimo and Nest working together everyone in the house sleeps better and more soundly.

Know your baby is resting well, with Mimo and Nest in your home.

Mimo and The crib sheet fits the US standard mattress size (28 inches x 52 inches), is completely machine washable (dry on low!). The Activity Tracker Turtle and Lilypad can also be used with Mimo kimonos and bodysuits.

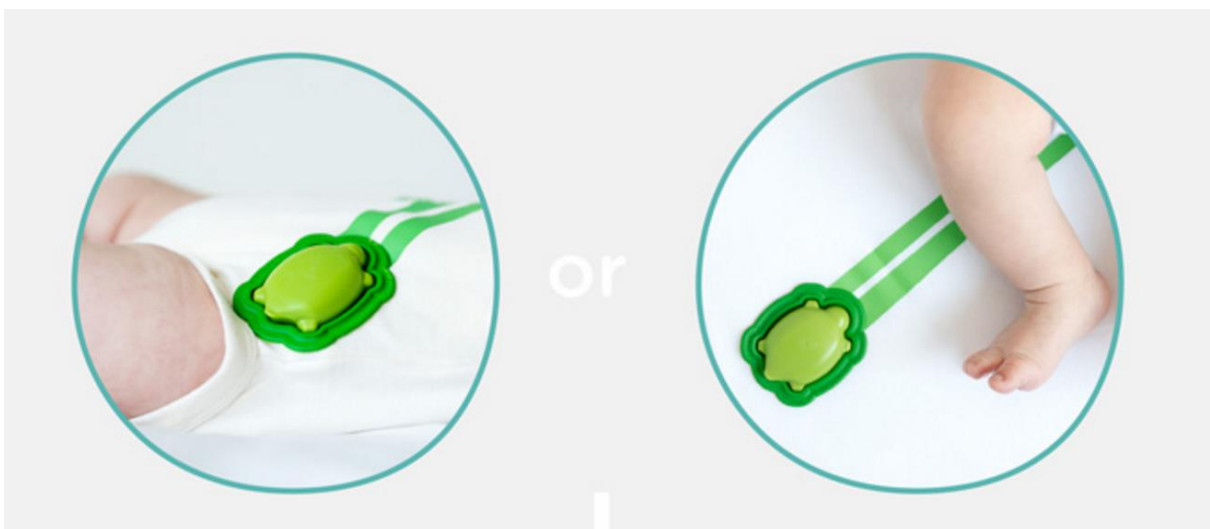

The Mimo Baby Sleep Tracker uses all-cotton kimonos and bodysuits to show you your baby's sleep activity, sleeping temperature, body position, activity level, and whether they are awake and asleep, all right to your smartphone.

➤ Sensors

Mimo uses proprietary sensor technology to give parents insight into their baby's sleep, helping them see patterns they never thought existed and develop plans to improve sleep routines.

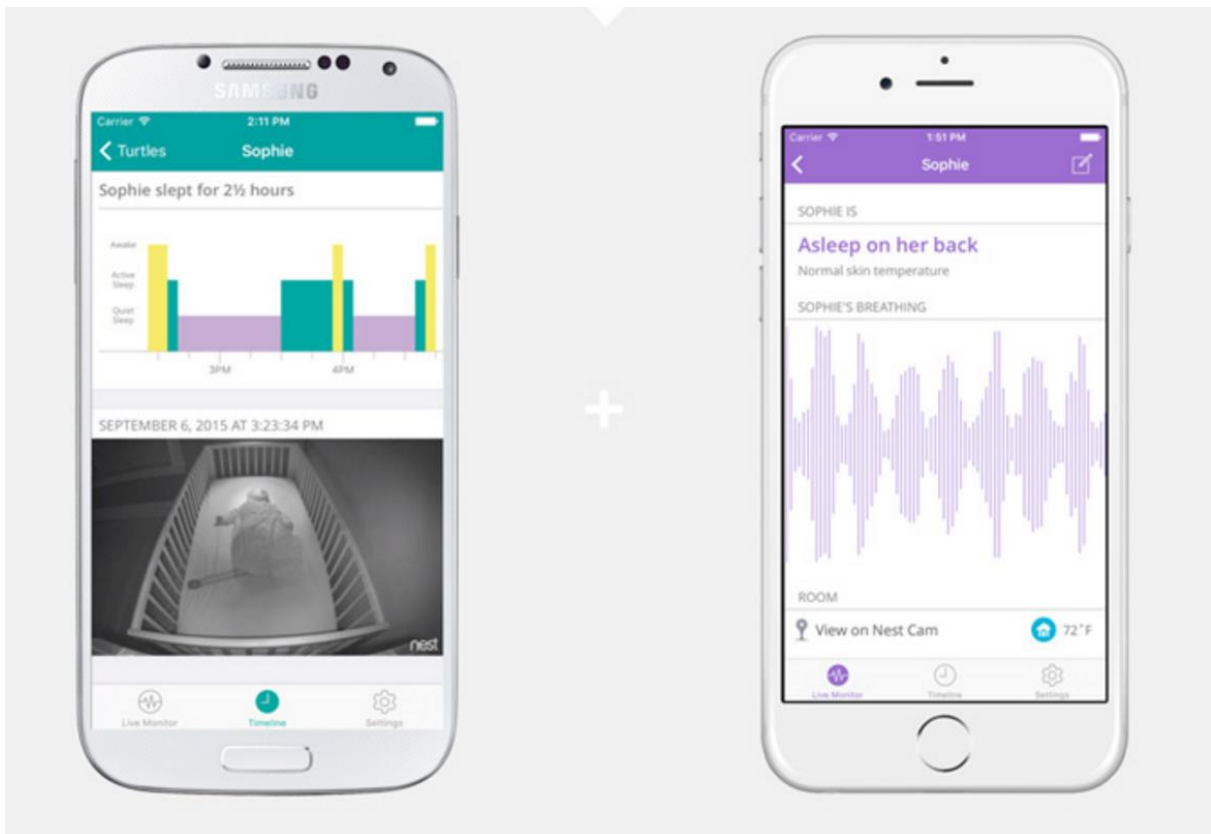

The nursery just got smarter: Mimo now works with select Nest products to provide you with additional peace of mind. If the baby is too warm, adjust the nursery temperature with your Nest Learning Thermostat. Are they moving? Check in on them with your NestCam. Better ways to stay connected and live smarter, all from one place.

➤ Connectivity

The Mimo Baby Activity Tracker uses a smart, washable crib sheet to show parents their baby's sleep activity and movement on their smartphone or tablet (iOS only). Parents and caregivers can see live data, and the Mimo Baby Activity Tracker also sends alerts (via push notification) if no movement has been detected after a certain period of time. In addition, a timeline is generated each morning to show your little one's activity throughout the night.

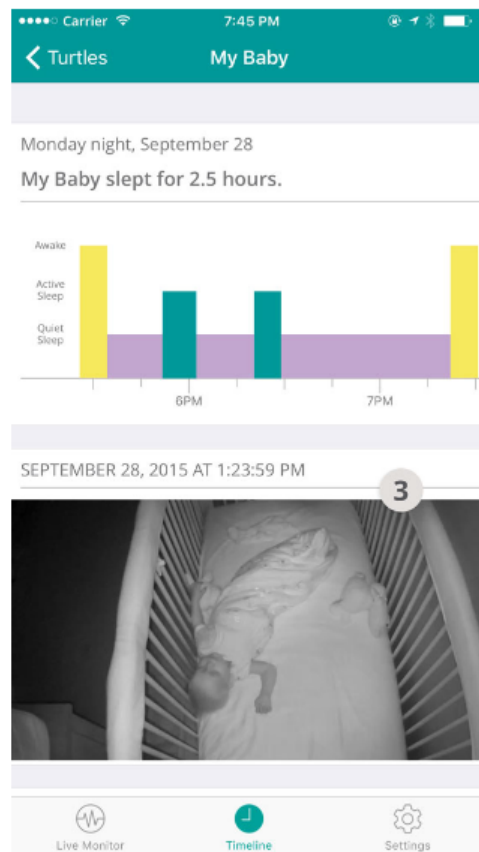

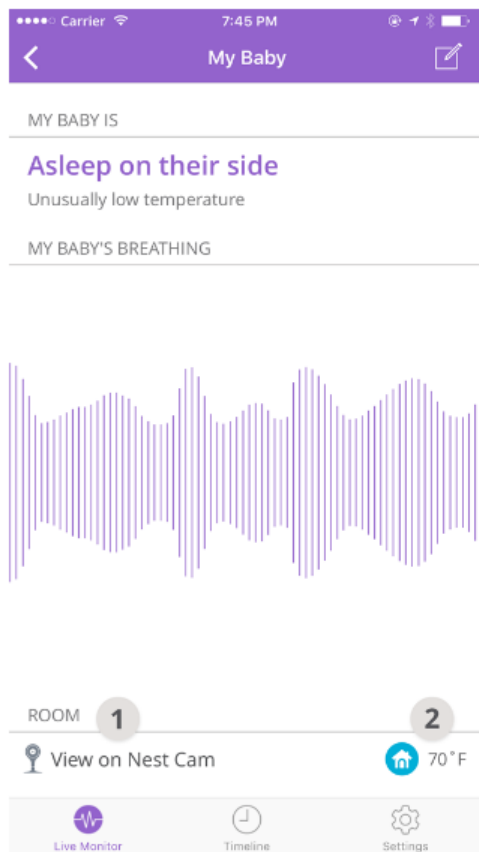

Using Bluetooth Low Energy (the safest technology available), this information is sent, along with live audio, in real-time to your smart device, and parents can share the information with as many caregivers as they like.

➤ Analytics

Is your little one too cool? Check the temperature in the nursery and then adjust room temperature from your Nest app.

Was there a motion event in the crib? See a screenshot from your Nest Cam Video History within your Mimo app (with a Nest Aware subscription).

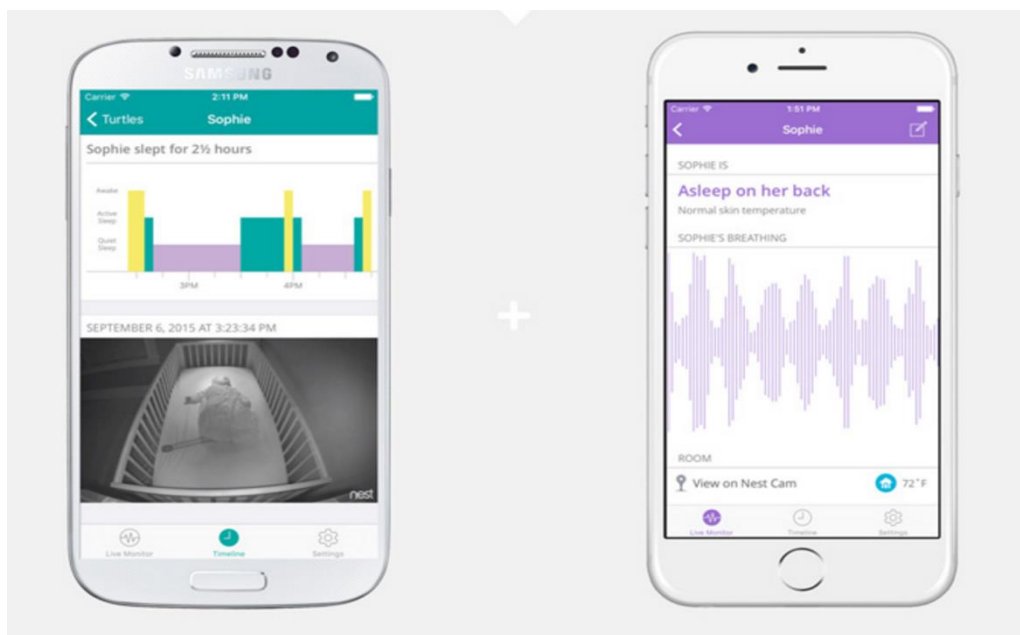

Keep an eye on what matters most from anywhere

➤ Smart Apps

Want to take a peek in the nursery? Switch between your Mimo & Nest apps.

Did the baby just wake? With a Mimo Monitor you'll be notified to changes in your baby's sleep activity and with Nest you can view what's going on in the nursery straight from your smartphone or tablet.

All results are logged in your smartphone and can be analysed over a prolonged period of time.
